Distribute feet on leveled ground keeping distances as pictured.

For the tents with lenght above 12m base constructions (10x8m or 10x12m) should be assembled first. Next, gently move one to the other as pictured.

Fix the feet to the ground using the rods. The rods should criss-cross.

Manner in which tent is fixed to the ground should be regularly monitored in order to assure the security of the tent.

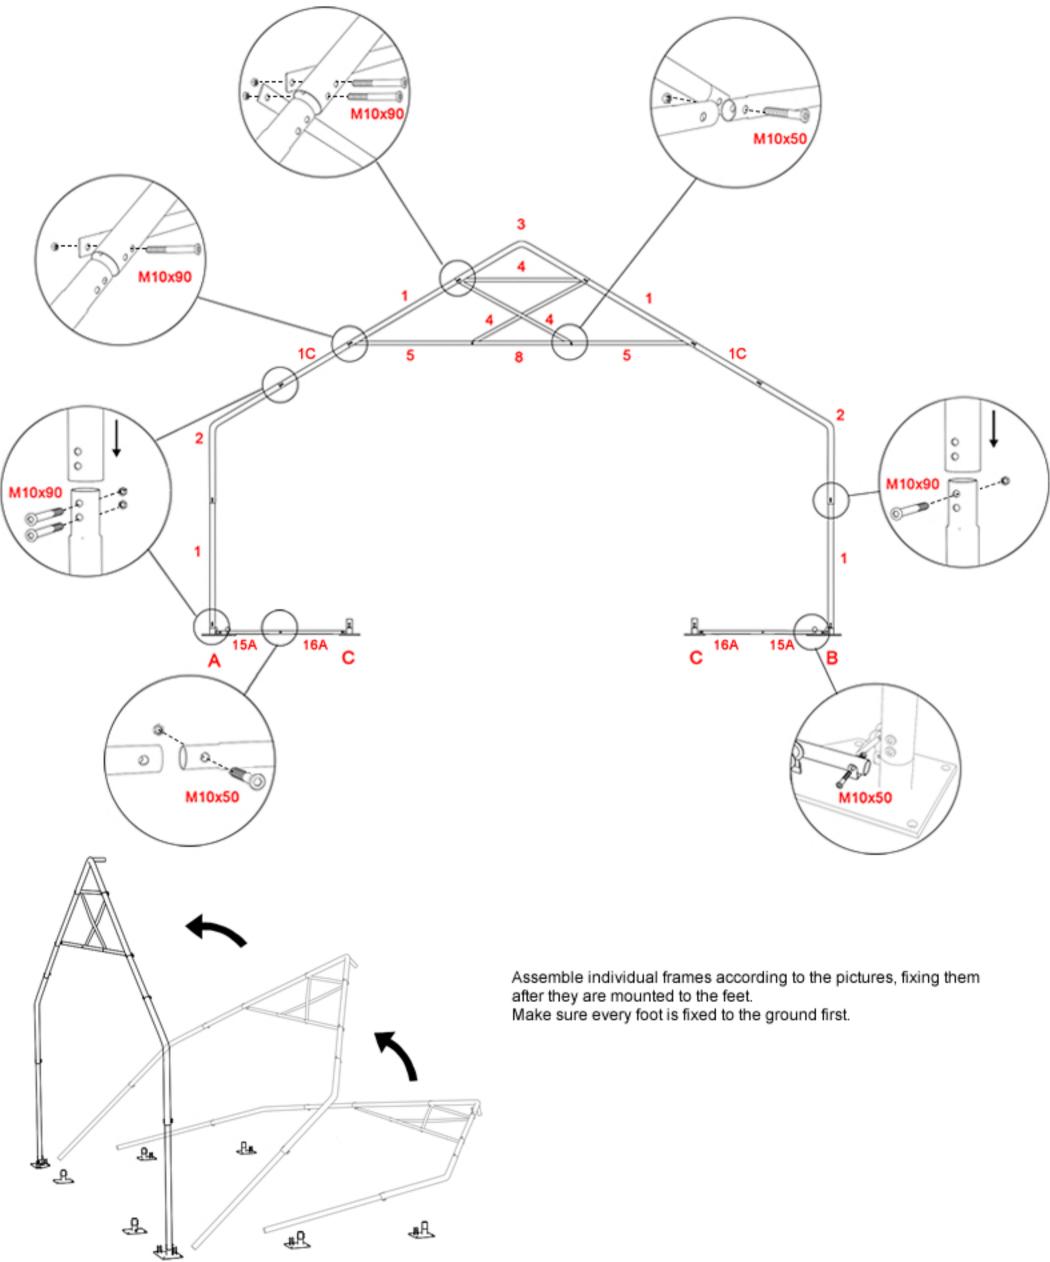

Attaching the tent to the ground correctly prolongs the durability of its components and the tent's construction as a whole.

Fix the buckle to the corresponding feet.

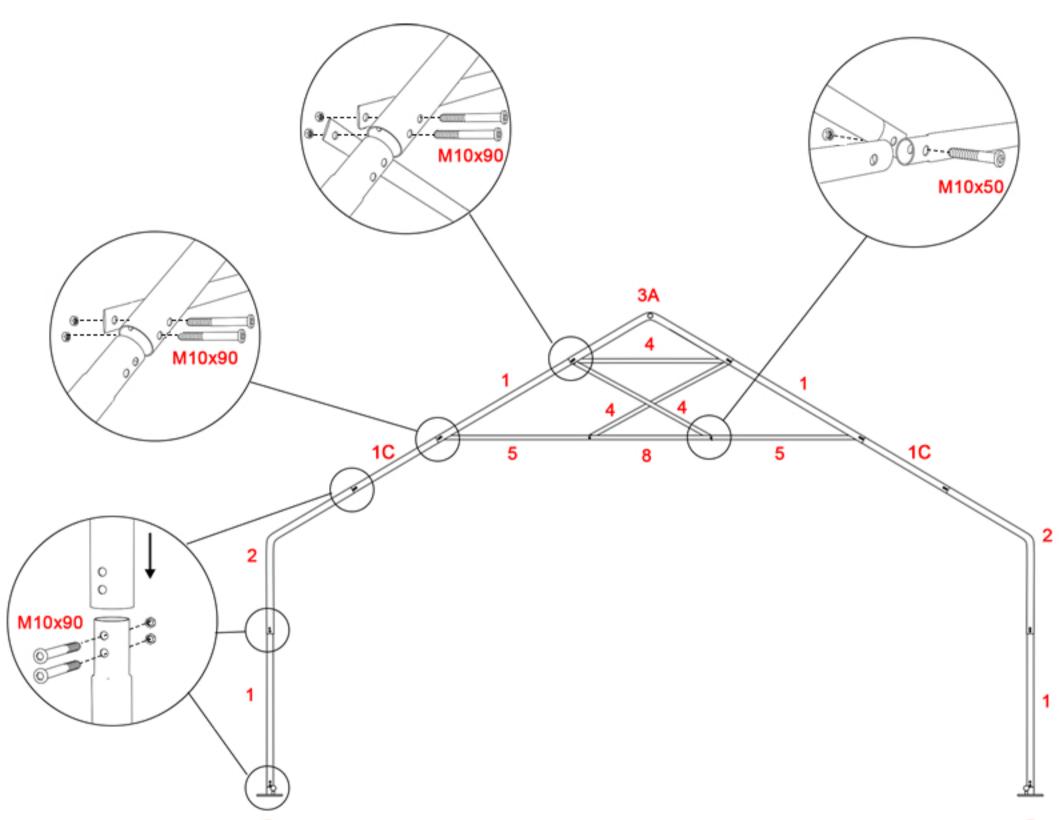

Connect tubes using the screws as shown on the picture. Make sure all the screws fit tightly.

Front and back entrance

Connect outer tubes and roof reinforcements using the screws. Repeat for the following extensions.

Inner frame

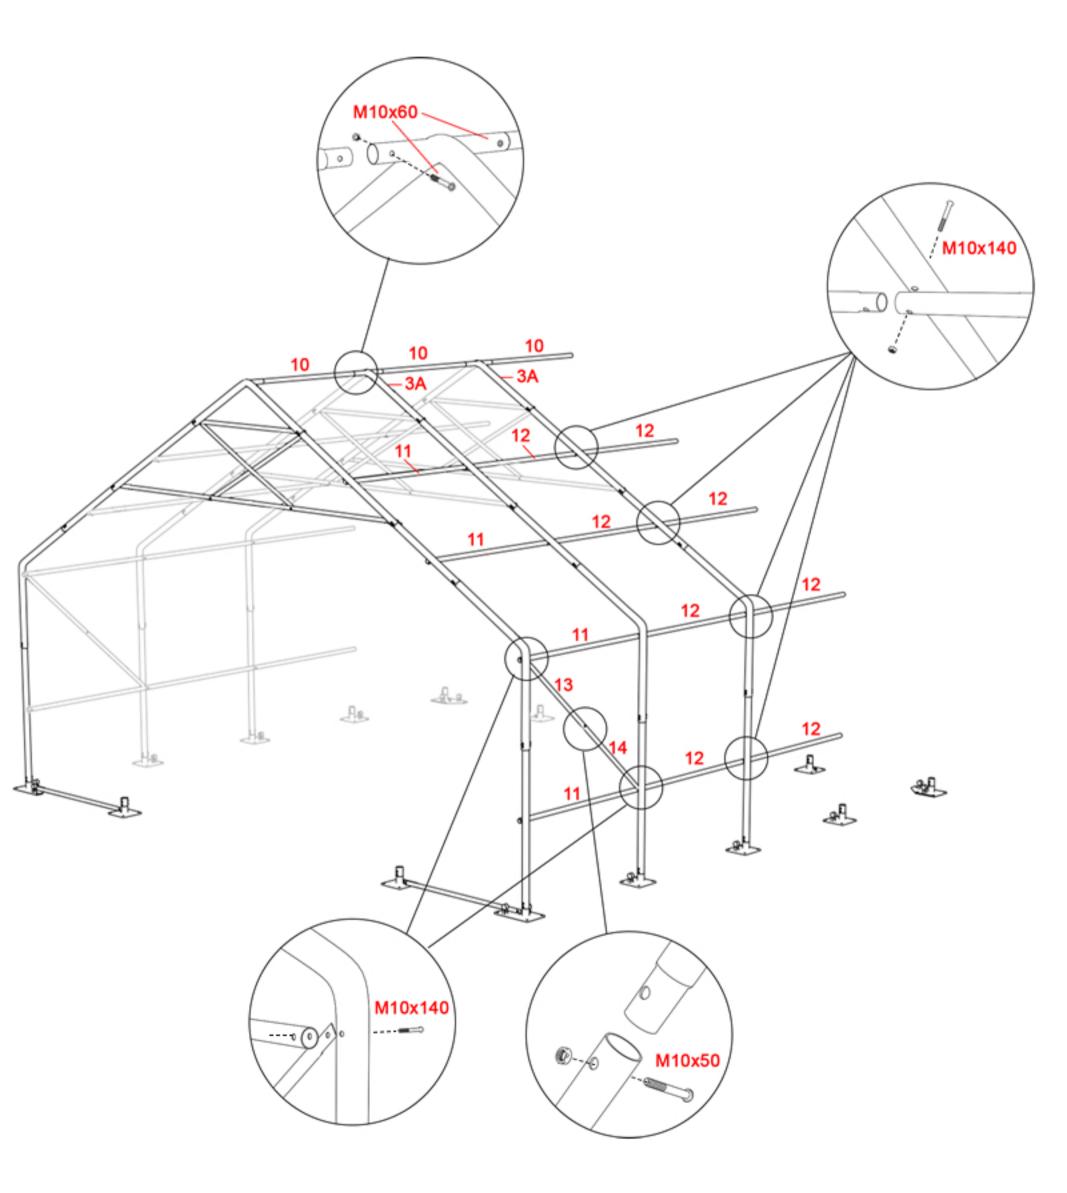

D

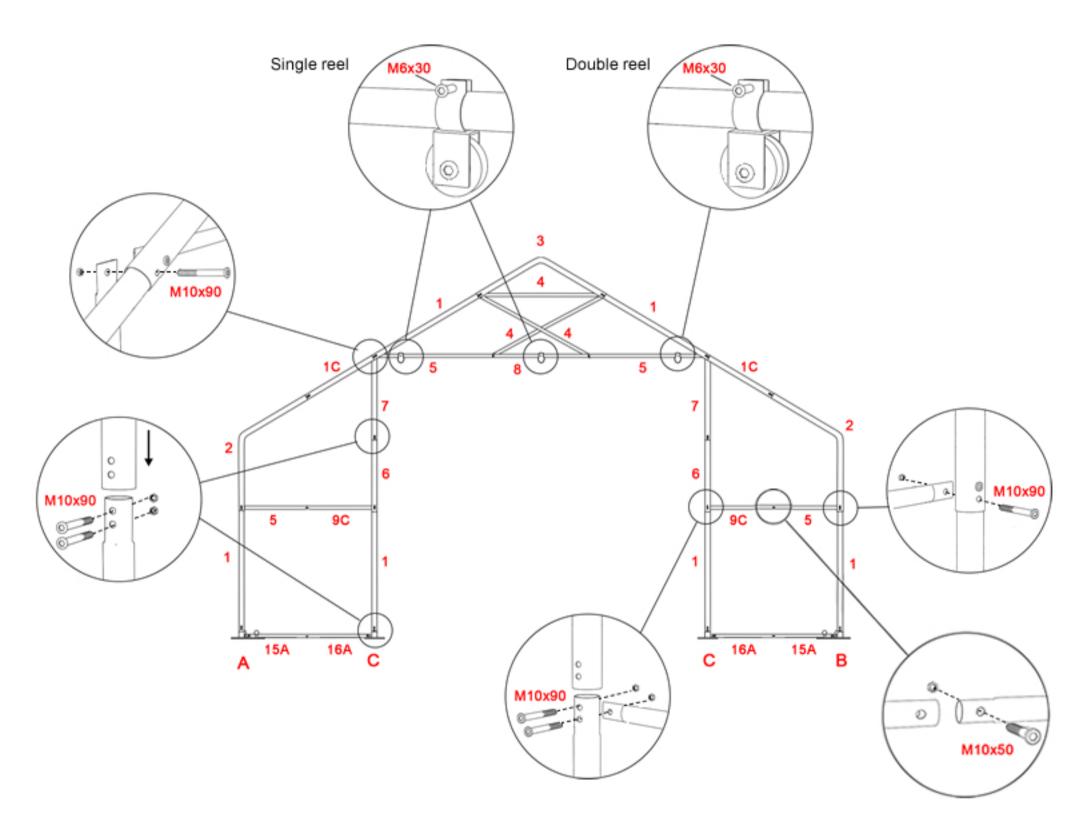

D

STEP 4

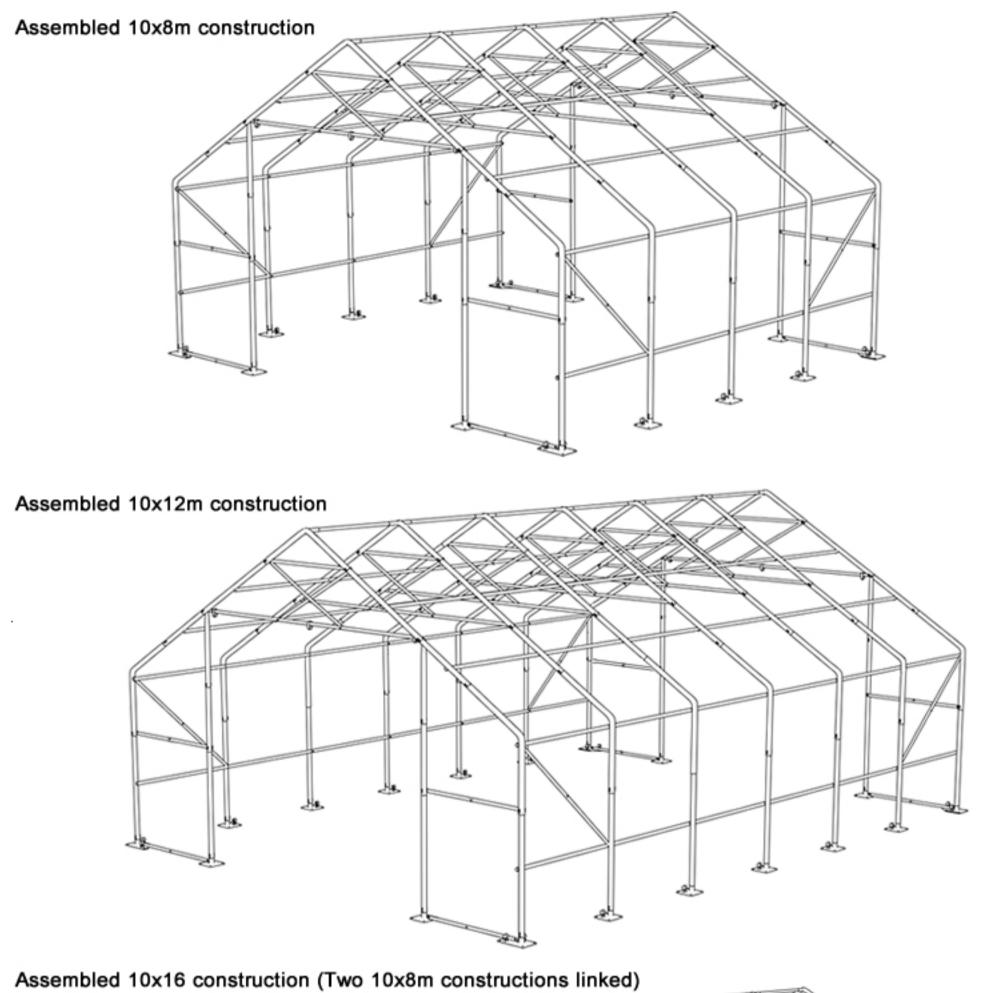

Connect all the frames using tubes. Diagonal side wall reinforcement should be placed in the first and second panel.

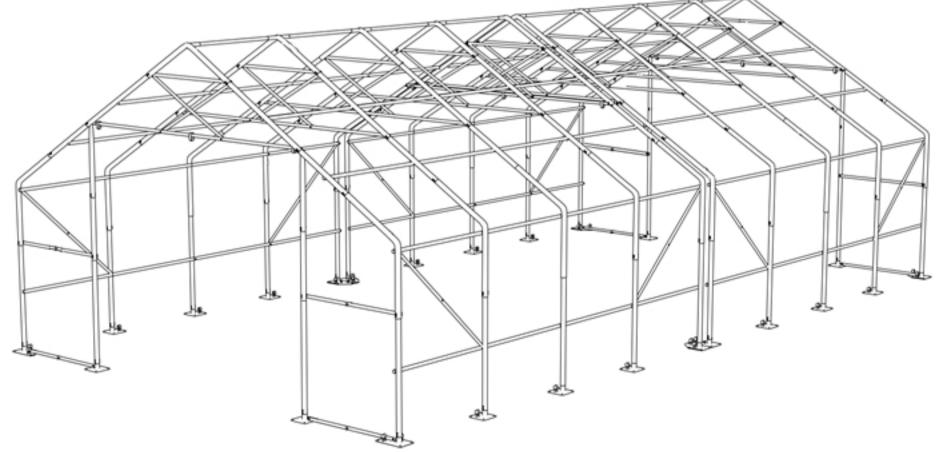

On the front and back frame mount entrance gate tubes. On the top tube fic reels (double reel on one side, one single reel in the middle and second on the other side)

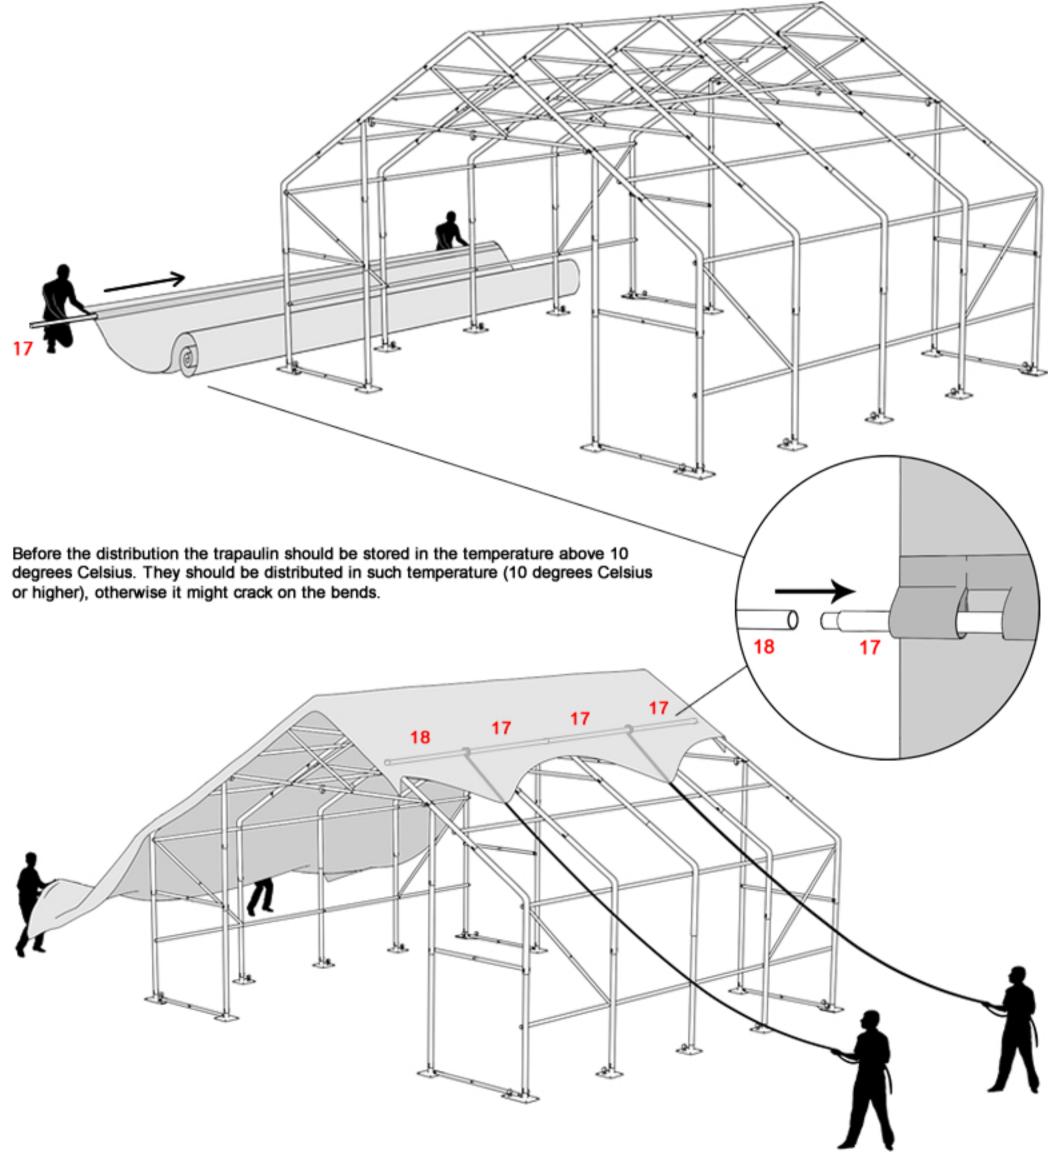

Przy konstrukcjach o długości powyżej 12m nie montujemy bramy wjazdowej między połączeniami głównych namiotów.

STEP 6

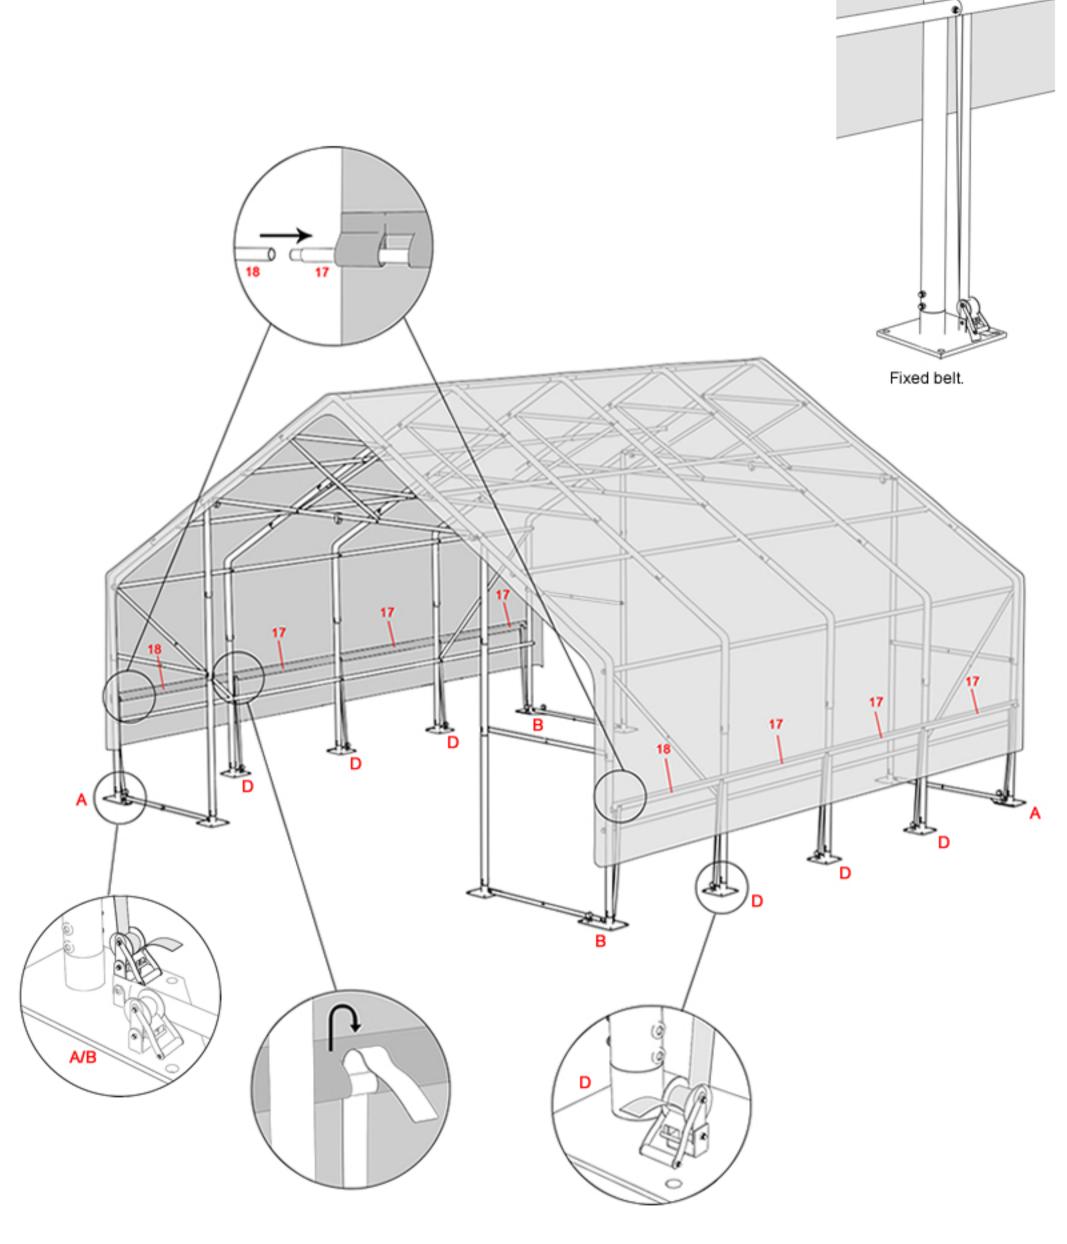

Distribute the tarpaulin along the wall of the tent. Transfer the tarpaulin through the whole lenght and width of the tent so it is possible to pull it to the pipes in the stitching using the lines. Make sure the tarpaulin is evenly distributed on each side. Remember that people on one side should pull and hold the tarpaulin so it can be easily moved on the steel construction on the other side.

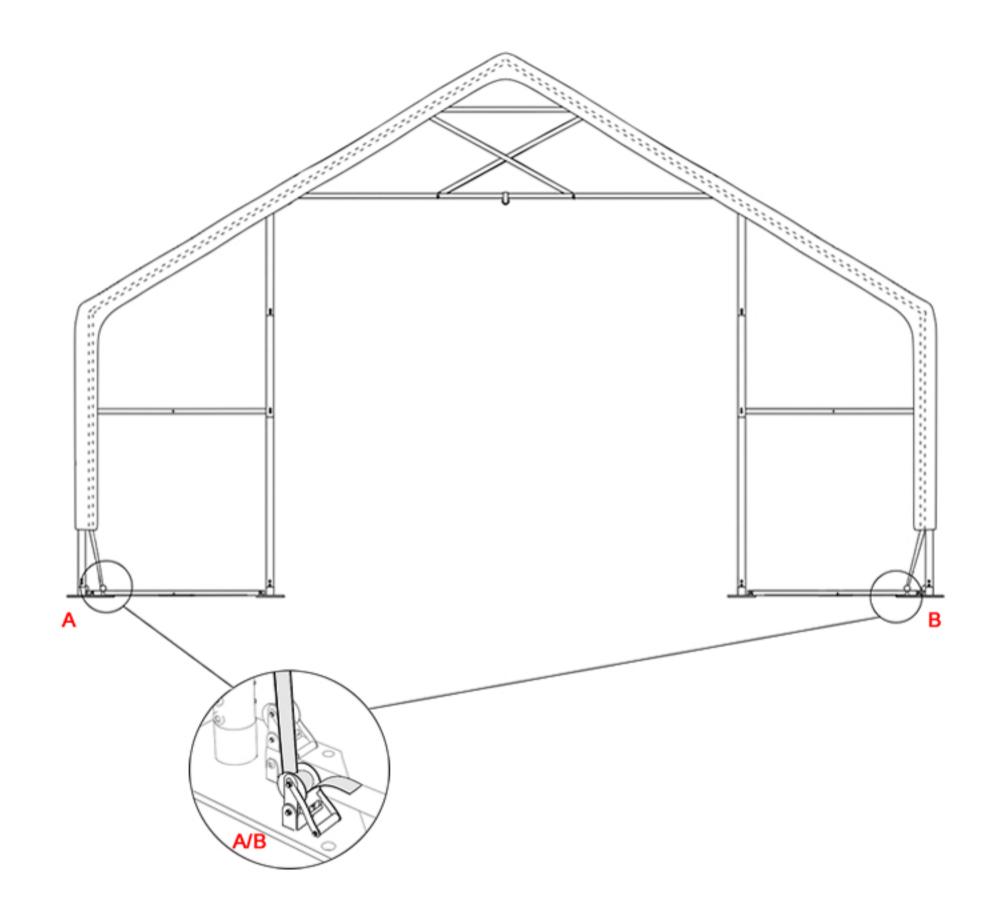

STEP 7

After the tarpaulin is in place, make sure all the pipes are placed in the stitching. Transfer belts through these tubes and pull on, hooking it on the buckle on the foot. Lock the buckle afterwards.

On the feet, transfer the belts through the tube and pull them, hooking them to the buckle located closer to the construction tube. Lock the buckle.

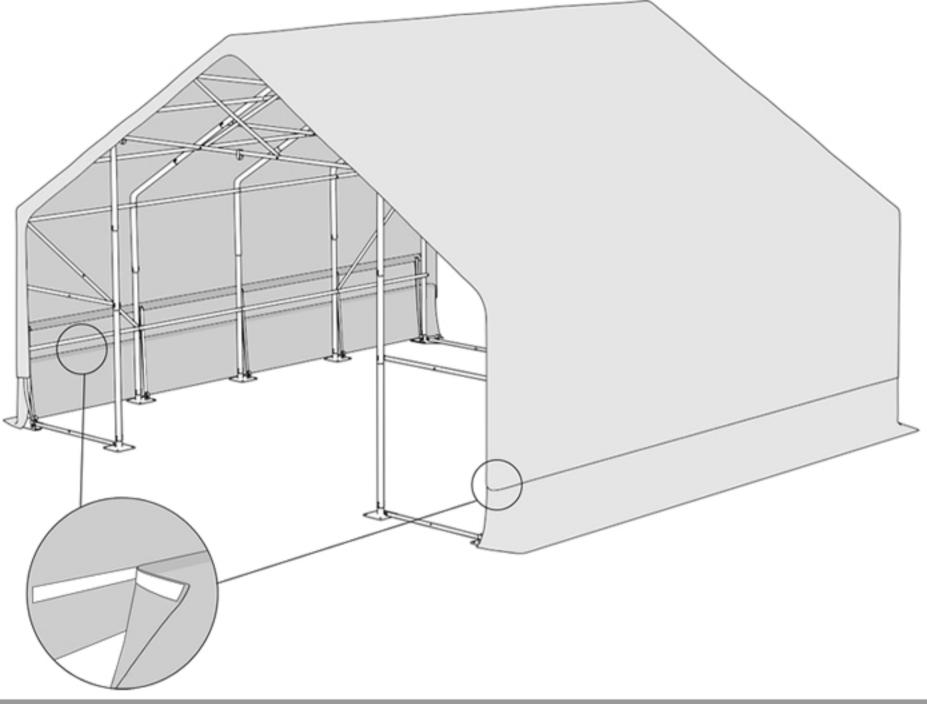

Pull the belt going through the tarpaulin on the entrances and hook it to the second buckle on the corner foot. Lock the buckle.

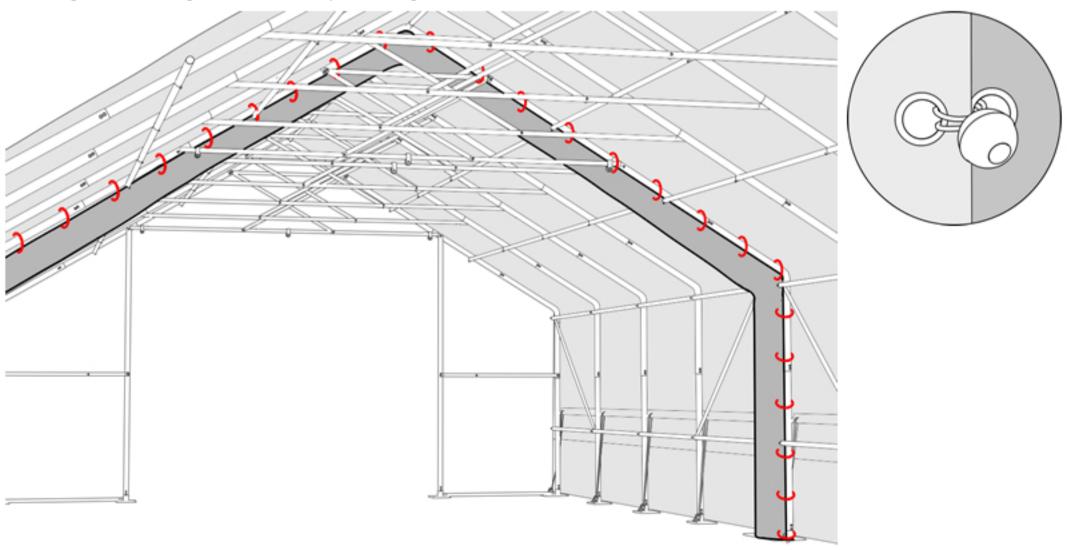

STEP 9

Fix tarpaulin extension on velcro.

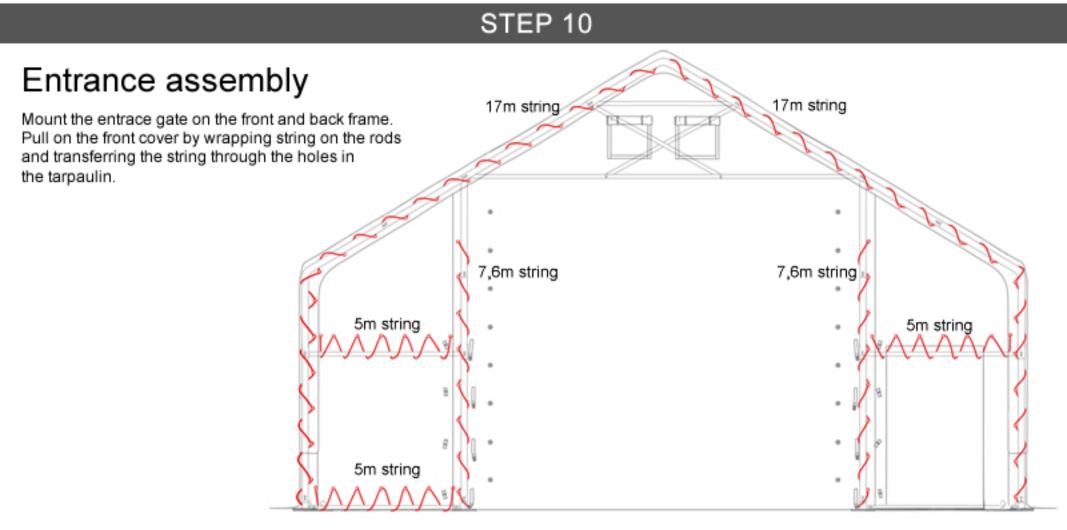

$\underline{\land}$ For the tents longer than 12m

Fix the gutter connecting two tents to the tarpaulin using balls with rubber.

Φ

Tent 10m type P78

STEP 11

Gate assembly

Put tubes in the bottom pockets of the gate. Put 22m string in the gate holes on the left, under single reel (put the reel over the pipes).

Pull the string through the reels along the gate to the double reel and again through the holes on the right side.
